**Novelty**

The compounds of the present application differ from those disclosed in D1 - D4 through the use of dimethylamino pyridine.

**Inventive Step**

The closest prior art considered to be D1, D2 (see column 23) or D3 (see example 4c).

The only difference between the process of the present claims and those of D1-D3 is the use dimethylaminopyridine for the reaction of the compounds of formula II and III in place of pyridine.

The skilled person would have readily considered replacing pyridine by dimethylaminopyridine (qualitative) and through the polar aprotic solvent.

The problem underlying the invention is provision of a further process for the preparation of irinotecan base having surprising effects compared to the closest prior art.

The present process allows simpler "work ups" compared to the processes of the prior art

involving pyridine and gives rise to considerably higher yields than the prior art processes (cf page 2, line 6 in the description of the present application and example 1 of the application). The skilled person would not have considered that dimethylaminopyridine and polar aprotic solvent could be used to achieve these effects, such that an inventive step may be acknowledged.

**VII**

Contrary to the requirements of Rule 5.1(a)(ii) PCT, the relevant background art disclosed in the documents D1-D4 are not mentioned in the description, nor is/are these documents identified therein.
